

SOLARRA

Now with economics!

Start presentation

Problem card: Population and Consumption

Mixed economy

40 survivors

Speaker 1 joined the game

Welcome to Solara

Inside a Brooklyn house

Solara (tropical island)

Population: 40

Districts: Brooklyn, Maikuduk

Economy: Mixed

Team: Common Ground

Goal 1

Food and water for everyone

Goal 2

Freedom to work, trade, own a home

Goal 3

Save nature for the future

Map of Solara

Legend

- 1  Houses: all 40 people live here
- 2  Sheep Farm
- 3  Fresh water, fishing area, Fertile land (under the trees)
- 4  Shipwreck: our first tools came from it
- 5  Pier: port for boats and trade
- 6  Grass cape: wind turbines later (west wind)

Who owns what?

Private: yours

- Your house and your plot in Brooklyn
- Every family gets the same size plot
- What you grow or make is yours to sell

Shared: everyone's

- The pond, the fishing area, the sea
- All of Maikuduk (the jungle)
- The pier and the roads

Water rights

Everyone gets the same drinking water. Drinking first, farms second.

Nature rules

No houses in Maikuduk. Only cocoa and bamboo can be collected.

Our resources

Island chest

Wheat

Medium: small farm

Fish

High: easy to overfish

Fresh water

High: only 1 pond

Watermelons

Medium: we eat them
fast

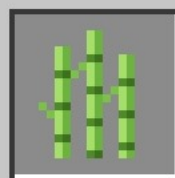

Sheep

Low: meat and wool

Cocoa

Medium: only on jungle
trees

Sugar cane

Low: grows by water

Wood

Medium: a lot now, not
forever

Bamboo

Low: grows back fast

Cookies

Crafted, not natural

SCARCITY

We have a lot of wood. But not enough Food, water and space.

Our island's status bar:

Speaker 3 joined the game

Crafting our economy

Crafting

Market

+ Freedom

- nobody protects the
pond

+

Command

+ Fair shares

- no reason to work
harder

Mixed economy

Freedom + Fair rules

People decide

what job they do
what to grow, make and sell
what to do with their house

Island Council decides (8 people, voted in)

how much fish and water each person gets
which land is protected
tax: 1 of every 10 loaves to the Food store

Jobs on Solara

40 people

Farmers
x10

Builders
x8

Fishers
x6

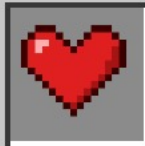

Bakers
x3

Water
keepers

Doctors
x2

Teachers
x2

Kids
x4 {school}

Our shepherds at the sheep farm

Jobs nobody likes

Cleaning, night watch, carrying water

Everyone takes a turn, 1 week each

Land + labour + capital

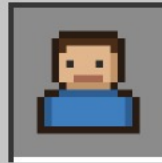

Recipe: one loaf of bread

LAND

wheat

+

LABOUR

the baker

+

CAPITAL

the oven

BREAD

×1

Land: Fertile land, the pond, the jungle. Only Brooklyn can be built on.

Labour: our 40 people and their skills, from Fishers to doctors.

Capital: tools from the shipwreck. Next: ovens, fences, water tanks, boats.

What? How? For whom?

What?

Food first

Then water, tools, repairs

Cookies and cake only if we have extra

How?

People run the farms, fishing and bakery

Rules: fishing limits, rainwater tanks, crop rotation

For whom?

Basic needs: everyone gets the same

Extra stuff: you trade for it

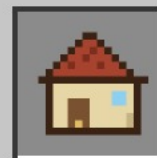

Basic needs, guaranteed for everyone

Food

Clean water

A home

A doctor

Choices + opportunity cost

Houses or forest?

Cut it for houses

> Keep the forest <

It gives us cocoa, bamboo and water, and our kids will need it too.

Opportunity cost

The new houses. Brooklyn stays crowded.

Bread or cookies?

> Bread <

Cookies

When Food is low. Bread needs only wheat and fills you up more.

Opportunity cost

The cookies: less variety, less to trade.

The problem

Population and Consumption: we use the island faster than it grows back.

How it happens

More people in
Brooklyn

More Food and
water needed

Fish and trees
can't grow back

An empty island
for our kids

Protect these first:

Fresh water

only 1 pond, nobody lives
without it

Fish

a small area is easy to
overfish

Maikuduk

cocoa, bamboo and wood
come from here

Our plan: 6 rules

Rule 1 unlocked!

Fishing only 3 days a week

fish have time to grow back

Rule 2 unlocked!

Cut 1 tree, plant 2

wood never runs out

Rule 3 unlocked!

Build with bamboo first

grows back much faster than trees

Rule 4 unlocked!

Rainwater tank on every roof

we don't depend on 1 pond

Rule 5 unlocked!

Maikuduk is protected

only cocoa and bamboo can be taken

Rule 6 unlocked!

Build up, not out

new homes get a 2nd floor, no new land

Over-consumption: rules 1-4 · Future generations: rule 5 · More people: rule 6

Is the plan worth it?

Solara Sustainability Plan

Advantages:

- + Fish and trees grow back
- + Water for everyone, even in dry weeks
- + The jungle stays for our kids
- + Nobody goes hungry

Disadvantages:

- People can fish less
- Water tanks need wood and work
- Brooklyn stays crowded for now
- Someone has to check the rules

Trade-off: a bit less today, so there is enough tomorrow.

Fits our mixed economy: people still own farms and trade, the council only limits shared things.

Advancement Made!

Saved Solara for the next generation

THANK YOU!

Scarcity > choice > opportunity cost > our plan
